

Designer: Michael Wieser

**What is Gamification?**  
Gamification is motivational design...  
the use of game elements and game mechanics  
in a non-game context.

# AI and Data Science within Drug Development

# Project Proposal

**Program Title:** AI and Data Science within Drug Development

**Description:** The main objective of the program is to provide a general understanding of the use of AI and Data Science in drug development.

**Objectives:** As a result of this program participants will acquire general knowledge on the use of AI for the key phases of Drug Development. They will be able to demonstrate basic principles of AI and application through individual cases studies.

**Audience:** Internal and External audience with high interest on Data Science and AI

## Learning Outcome

By course end, participants will be able to:

- **Demonstrate** Curiosity on AI and Data Science for Drug Development
- **identify** AI Technologies and its uses to support the process of Drug Development
- **Explain** basic principles and application through cases studies

## Modules

**I:** Drug Development in Novartis, phases and processes.

**II:** AI and Data Science in Drug Development

**III:** Technologies and systems and related Cases studies

# Welcome to the Journey!

The main objective of the program is to provide a general understanding of the use of AI and Data Science in Life science in general and drug development.

In this program we would like to engage the participants to acquire general knowledge on the use of AI and Data Science for the key phases of Drug Development and having foundational knowledge about Data Science. Participants should be able to understand basic principles and application through cases studies.

With using and applying elements of gamification during this learning journey we would like to make sure to engage with the learner, creating appetite for the topic of AI and Data Science and getting attraction to the topic and Course.

# Why Gamification

Learner Engagement - We would like to create appetite for this topic and therefore apply elements of gamification during this learning journey will help us to engage with the learner and also demonstrate the importance of creating new ways of learning solutions.

The Why - The world in learning is changing and growing fast and especially during a pandemic we need to find an even more creative way to engage with our learners. Therefore, i think it is critical and highly relevant to invest into future learning solutions, try to think outside the box and how to make a learning solution more compelling and interesting for the associate.

That`s why i believe in gamification for learning solutions. During all the design phases we should always keep in mind, that not every associates is willing and has the time to spend going through an entire learning journey. Therefore, knowing your customers and understanding the WHY is critical.

# Learning Outcomes

By course end, participants will be able to:

- **Demonstrate** curiosity on AI and Data Science for Drug Development
- **identify** AI Technologies and its uses to support the process of Drug Development
- **Explain** basic principles and application through cases studies.

# Goals and Objectives

## WHAT?

1. **Demonstrate** curiosity on AI and Data Science for Drug Development

2. Participants went through available Resources in LinkedIn and Coursera

3. Participants will have access to resources (e.g. equipment, reference materials, knowledge, time) needed to engage in aerobic activities.

## WHO?

GDD Associates

GDD Associates

GDD Associates

## HOW MUCH/MANY?

60% of Associates will have access to necessary related resources

65% of Associates went through the courses and with a passed score of at least 75%

30% of FTEs will have access to necessary related resources

## BY WHEN?

Within 10 weeks of program start date.

Within 12 weeks of program start date

Within 12 weeks of program start date

# Objectives and Key Results

Objective	Key Result 1	Key Result 2	Key Result 3
become familiar with drug development in Novartis, its phases and processes	Increase of 60% at least through knowledge checks	70% solving use cases with a score of 75% and more	
identify AI Technologies and its uses to support the process of Drug Development	70% of learners knowing AI Technologies	Associates using AI in their projects	People talk to each other about AI within Drug Development
Creating Community of Practice	At least 100 Associates within the Community of Practice	Associates with Regular Posts	Townhall Presentation

**The main objective of the program** is to provide a general understanding of the use of AI in Life science and drug development. Using a gamified approach should trigger the interested of the Novartis Associates and should also demonstrate the value and diversity of learning for the outside world

# Persona

<b>Name</b>	Chelsea
<b>Demographics</b>	36, female, no kids, Expad, based in Switzerland, originally from Singapore
<b>Psychographics</b>	Team-player, result-oriented, agile, collaborator, highly motivated and visible
<b>Experience</b>	8 years in the company, 2 years on the job
<b>Biggest challenges on the job</b>	Managing work-load and expectations
<b>What he/she values most about the role?</b>	Highly visible role and if she is doing well in here role, she can influence the business, being a role model
<b>Workday flow</b>	Start with virtual meetings with the India Colleagues, followed by F2F Meetings with Basel Colleagues and then time to work before meetings with US Colleagues starting
<b>Technology and how it is used</b>	Interested in using new technologies, but have not a deep understanding
<b>Where training will take place</b>	Busy agenda, so training need to align with business objectives and should not go the entire day. Should be doable between meetings
<b>Games played</b>	Monopoly and Treasure Hunting were the games they played when they were young
<b>Fears and Frustrations</b>	Biggest fear is that she can meet business objectives but has not enough time for individual learning and development and how to align.
<b>If you gave them \$1,000 and a day off from work, how would they spend it?</b>	Would invest this money for personal development attending a conference

# The Experience

---

## **CHARACTER:**

Who is your main character, and what is your character like

The main Character of the story is Heidi. The character of Heidi will be an Avatar in the entire story and the gamer needs to guide Heidi through the entire game and learning experience. Heidi is a young lady born in Singapore, but she lives since her age of 3 in a very small village in the Swiss mountains. After she finished her high-school in Bad Ragaz she started to study pharmaceutical at the University of Zurich and now she is highly interested to get a job within Novartis as Data Scientist as she is very passionate about Drug Development, Artificial Intelligence and Data Science. Heidi gained that interest over the last couple of years at University, reading many eBooks and attended virtual conferences.

---

## **CHALLENGE:**

What challenge or problem must your character solve?

Heidi wants to work for Novartis as Data Scientist and therefore she needs to learn the Novartis Drug Development Process and how AI Technologies and its uses to support the process of Drug Development. She knows that Novartis is quite passionate about using new technologies like Artificial Intelligence in their internal process to reimagine medicines. During this game Heidi needs to prove that she is worth working for Novartis.

---

## **MOTIVE:**

What is prompting your character to solve the challenge?

As Heidi wants to work for Novartis and she knows that Novartis is very passionate about using new technologies Heidi is curious and motivated to learn and apply what she is learning along the journey. Heidi would like to learn from experiences and challenges she is doing throughout the game.

---

## **SETTING:**

Where and when does your story take place?

The story takes place in the year 2035, very futuristic environment. Everything starts in the hometown of Heidi where she is seeing an announcement on a big E-banner with announcement from Novartis that they are hiring. Heidi is on her way to travel to Frankfurt visiting a former colleague who is now working for Novartis. She is very curious to learn more about this announcement and therefore she is trying to find out more during her trip to Frankfurt and during her stay in this large European City. Some insights about the futuristic setting: (e.g.) futuristic voice recognized bots available guiding you through the entire challenge; electronic boards; no news paper; everything fully digital

# The Experience

---

## **OBSTACLES:**

What obstacles stand in your Character's way?

Competitors along the way – other people who also would like to join Novartis as Data Scientist; she needs to be better than them.

Timing (e.g sitting in the train going from A-B; make sure you to not miss the connecting train)

Do not find the Map from the City, how to navigate; how to find tourist information

---

## **CLIMAX:**

How does your character finally solve the challenge?

They gamer will guide Heidi on her journey. Through the used mechanics like Hints, Pills Drug Capsules and Mentorship Heidi will gain more and more knowledge around AI and Data Science and Drug Development. She will be able to solve the questions, knowledge checks after each individual module. Heidi will be able to get the individual badges for uploading to her 2035 futuristic LinkedIn Profile and can then apply for a job within Novartis and will get interviewed. Mentorship can also be replaced through some podcasts, movies and Ted Talks through experiences Novartis Employees. Maybe she will get some names from Novartis whom she may be able to contact or reach in the game environment – Challenges in the Modules can also be simple questions and puzzles...

---

## **OUTCOME:**

What is the outcome of the story?

The outcome of the story is that Heidi is comfortable to apply for a position within Novartis. As she went through the entire game, she know become familiar with drug development in Novartis, its phases and processes. By course end Heidi will be able to Demonstrate Curiosity on AI and Data Science for Drug Development, identify AI Technologies and its uses to support the process of Drug Development and she will be able to Explain basic principles and application through cases studies

---

# Mechanics

to trigger action and give feedback/recognition/reward to actions taken.

Mechanic	How mechanics will be used in the Game	Where they will be used:	
<b>Achievements</b>	The gamer will be able to see the achievements after finishing every module, this should help them to track individual status within the game. Every achievement contains as well a summary of content and at the end the gamer will receive a personal playbook for reference.	Available in all the Modules	
<b>Leaderboard</b>	The Leaderboard will be available in the main Dashboard of the game and will show who is currently leading the game. This Leaderboard is also visible within the Gamer Community – Will help the learner to power up.	Track 1 Track 2 Track 3	
<b>Mentorship</b>	Mentorship will be available in the final module to help learner to go into more detail of the content if they wish and the possibility for network. Mechanic of Mentorship will be introduced at the beginning of the game	After finishing all the Modules	
<b>Hints</b>	Hints are provided to the learner through the entire game – With the usage of hints I would like to make sure that we can provide more detailed information around the content and to keep the players motivated to moving on.	Available in all the Modules	
<b>Drug capsules or pills</b>	Drug capsules or pills floating in the environment as they roam or make even need to find them to be able to answer some questions	Available in all the Modules	
<b>Badges</b>	Badges will be used to acknowledge the achievement of the individual learner. Learners will get a badge after successfully finish a Module and then of course the big bold badge, once they have successfully done the entire game. All the badges can be added to the individual profiles, attached to email address, etc.	After successful Course participation and also after every individual module	

Highlevel Program Overview and Welcome

Navigation & Resources

Journey and Challenges

Quiz and Start of Journey

# Prototype – Module Welcome and Introduction

## Some challenges through Module 2:

- Understand Data & Data Science, key AI concepts and application
- Understand Data / AI's impact on Healthcare and Novartis with high-level use-cases
- Application of good data practices
- Foundations in analytical analysis
- Fundamentals of AI
- AI in Life Science
- AI in Drug Development

Prototype – In the City

4 weeks for finishing the courses

AI for Everyone

Machine Learning and AI Foundations:  
Predictive Modeling Strategy at Scale

AI in Life  
Science

Artificial Intelligence Foundations

Applied Machine Learning:  
Algorithms

AI for Drug  
Development

Prototype – On the way

# Player Feedback

- Amount of Content might be a challenge
- What a about Company specific terminology of Data Science and AI
- maybe a segmentation of the target audience would be good
- How many associates are you going to target...?
- Nice flow outline
- How many hours has the associate for going throught his journey...?
- Where will you host the training...?
- How will you integrate the manager in the game...?
- Statements and welcome video from the Executive Committee would be nice

## Pack Your Bags... It's time to go!

### Please tell us more about you.

- Design and Development Manager for the @ Novartis Pharmaceuticals focusing on Data and Digital Capability Building.
- Experienced project and design manager with a very strong sense of organizational and project management skills. Deep interest on applying new technologies and new ways of working within the learning landscape.
- Innovation and gamification in learning solutions is my motivation to improve my skills from day to day. My ambition is to inspire and influence my colleagues for an open mindset, collaboration and new ways of working.
- I would like to gain and stretch my knowledge about how to apply gamification in learning solutions. My goal is to make the learning journey for the associated exciting.

POST CARD

Having a Great time!  
Wish you were here!

Unforgettable is the Indian Summer Roadtrip. Last destination was Martha's Vineyard
